Submodules

SimplexConsilium.Boards module

Created on 28th October 2018 by blackat.

class SimplexConsilium.Boards.Board [source] Bases: enum. Enum

Three different sections: Board.TODO, Board.DOING, Board.DONE.

DOING = 1**DONE** = 2

TODO = 0

SimplexConsilium.DateFormat module

Created on 25th October 2018 by blackat.

class SimplexConsilium.DateFormat.DateFormat [source]

Bases: enum. Enum

Three different date formats. BigEndian = 0**LittleEndian** = 1

MiddleEndian = 2

SimplexConsilium.DocToObj module

class SimplexConsilium.DocToObj.DocToObj [source] Bases: object

initsimplexproject(project_file_path: str) → SimplexConsilium.SimplexConsilium.SimplexConsilium [source]

SimplexConsilium.Goal module

Created on 24th October 2018 by blackat.

class SimplexConsilium.Goal.Goal(name: str)

Converts a dumped SimplexConsilium object to an object again.

addindividual(individual: SimplexConsilium.Individual.Individual)

Adds an Individual to accomplish the goal.

[source]

[source]

[source]

[source]

[source]

[source]

[source]

[source]

[source]

Parameters: individual – The Individual to add.

createhash() [source] In every python session a random seed is established to generate a hash, the ID of a

Goal is fixed in its creation process.

individual init_date

description

Bases: object

removeindividual(individual: SimplexConsilium.Individual.Individual)

Removes an Individual from a the Goal.

Parameters: individual – The Individual to remove.

todoc() [source] Converts the object to json to be stored in a json file.

SimplexConsilium.Individual module Created on 25th October 2018 by blackat.

class SimplexConsilium.Individual.Individual(name: str) Bases: object

SimplexConsilium.Persistor module

todoc() [source] Converts the object to json to be stored in a json file.

[source] class SimplexConsilium.Persistor.Persistor(project_name: str) Bases: object

persistent_project(project_dict: dict) [source]

SimplexConsilium.SimplexConsilium module

Created on 25th October 2018 by blackat.

[source] str) Bases: object

class SimplexConsilium.SimplexConsilium.SimplexConsilium(project_name:

add_doing(goal: SimplexConsilium.Goal.Goal)

accomplished

[source] Adds a Goal to the DOING list.

Return type: False if Goal already in DOING list. **Parameters: goal** – Some Goal to be added to the DOING list.

add_done(goal: SimplexConsilium.Goal.Goal) [source] Adds a Goal to the DONE list.

Return type: False if Goal already in DONE list. **Parameters: goal** – Some Goal to be added to the DOING list.

addindividual(*individual*: *SimplexConsilium.Individual.Individual*) → bool [source] Adds an individual to the project.

Parameters: individual – The individual to add to the project.

addtodo(goal: SimplexConsilium.Goal.Goal) Adds a Goal to the TODO list.

Parameters: goal – Some Goal to be added to the TODO list.

Return type: False if Goal already in TODO list.

gather_goals_description_by_index(index: int) → dict

Gets description of the Goals of all three boards: TODO, DOING, DONE, according to a specified index.

Parameters: index – The position to get the Goals of each Board.

removedoing(goal: SimplexConsilium.Goal.Goal) Removes a Goal from the DOING list.

removeindividual(individual: SimplexConsilium.Individual.Individual)

Return type: False if Goal is not in DOING list. **Parameters: goal** – Some Goal to be removed from the DOING list.

Removes an individual from the project. The individual will also be removed from all the goals of the project, except the done goals.

Parameters: individual – The individual to remove from the project.

removetodo(goal: SimplexConsilium.Goal.Goal)

Removes a Goal from the TODO list.

Return type: False if Goal is not in TODO list. **Parameters: goal** – Some Goal to be removed from the TODO list.

todoc() [source] Converts the object to json to be stored in a json file.
